

Press Release – October 2008

Concept Product Launch – 110V / 230V Screwdriver and Collated Autofeed Accessories – Extension Pole and 45-75mm Extended Attachment

After the launch in May of Concept's 110V / 230V Screwdriver and Collated Autofeed , Interbuild in October 2008 will see the launch of two accessories for the tools which will develop them into ' The All-in-One Autofeed Solution ' .

Extension Pole

Fitting onto the 110V / 230V Screwdriver and collated autofeed this extension pole allows the tradesmen to reach ceiling and floors for collated screw fixing with ease and without bending or platforms . The lightweight pole can be used with either the 25-55mm attachment or the 45-75mm attachment and comes complete with two handles that allow the user to find the most comfortable position to work and which can be both be used at the same time if the autofeed tool is in constant run . This pole extension is another development to allow fast , easy , effective fitting of collated screws .

45-75mm Attachment

Fitting and locking onto either the extension pole or power tool this longer attachment allows the autofeed power tool to be used to fix all collated screw sizes up to 75mm and is accompanied by extended bits to suit .

These two accessories mean that with starting from the 110V / 230V tool the tradesmen will have a screwdriver and collated autofeed that covers all sizes of collated screws and that allows fitting with a pole to avoid awkward and uncomfortable work and some becomes ' The All-in-one autofeed solution ' covering upto 4 tools that may have to be bought from other manufacturers .
