

## **Press Release – May 2008**

### **Concept Product Launch – 110V / 230V Screwdriver and Collated Autofeed**

Building on the success of Concept's cordless 14.4V Impact Driver and Collated Autofeed and the theme of ' Two Tools in One ' Concept has used its experience and knowledge to develop the 110V / 230V Screwdriver and Collated Autofeed power tool . A tool which sets the standard in corded autofeed .

The tool has been well thought out and includes many benefits which are not available on other power tools including –

- A high spin speed for superfast fixing . At 4600 RPM this represents an optimum spin speed without being so fast it causes jamming or damage to the head of the screw .
- 3 Belt clips ideal for left and right handed workers and a 5 metre double insulated cable which is longer than others and a lot more practical for users especially those using 110V transformers .
- The tool acts as a screwdriver with countersink nozzle as well as a collated autofeed and the two are quickly interchangeable and so is two tools in one and extremely good value for the user .
- From October 2008 there will be two accessories available to users being a 45-75 mm attachment which will allow the tool to be used for all sizes of collated screws and an extension pole which will make the tool ideal for ceiling and floors . These accessories will make it ' The All-in-One Collated Autofeed Solution ' and will increase the versatility and capability of the tool
- The spin speed of the tool is the optimum for collated woodscrews and has been developed to work perfectly with Concept's KTX Torpedo Professional Collated Woodscrews . There is no other tool better suited for collated woodscrews .

Concept have ensured that the tool is made to the highest standard and is superbly powered by the 480/500W motor .

Other features include –

- Forward , Reverse and Constant Run Function
- Attachment for 25-55mm Screws and all sizes in-between
- Countersink Nozzle , Bit holder and screw bits for individual screws
- Countersink control on the tool for perfect fixing

- Non slip coating on the nozzle of the autofeed to remove slippage and spare end pieces to fulfil long term needs
- Spare extended Philips bit for collated Drywall Screws
- Included with each tool are easy to follow set up instructions

Perhaps the greatest benefit is that all the above is incorporated into a tool which costs less than any other professional corded collated autofeed and underlines our claim that this tool sets the standard in collated autofeed .

The tool has a one year warranty . In testing the reliability levels are of the very highest standard .
