

Press Release – December 2007

KTX Professional Woodscrews

Winner of Top Product Award Professional Builder Magazine

Concept is proud to announce that KTX Professional Woodscrews have been chosen by the readers of Professional Builder , the number 1 trade magazine , as one of the Top Products of 2007 .

The screws are possibly the best professional woodscrews available today and offer some unique benefits over the competition not least of which are a stick fit in the head of the screw , a capability to handle various screw bit types and a free 50mm KTX bit in every box .

Although launched some time ago now the screws continue to receive plaudits from technical press and end users alike , quite simply these are screws you can use in more or less any application and won't let you down .

The main features of the screw that have helped achieve this award are –

- A stick fit head with good Pozi , KTX and square drive bits so allowing one handed fitting for certain jobs and ensuring there is no rimming out or wobbling and that all the torque and rpm applied by the power tool go directly to the screw .
- A free 50mm bit in every box so saving time and money buying bits and the 50mm bit make it the ideal choice for impact drivers as no bit holder is needed (bit holders are often damaged by the sheer power of impact drivers)
- An extremely high manufacturing quality that means that the screws do not snap or break and even allows drilling down into hardwood without the head coming off .
- Suitability to use the screws with various bits that means that no matter what bit you have you should always be able to use KTX .
- Quality that means the screws require up to 50% less energy than other screws so making fixing easier and saving the batteries on the power tool to enable even more fixing on a battery charge
- An ability to fix the longest screws in approx half the time it takes with the other leading brands
