

# Concept Distribution Launches New Lines

Concept is extending its range of exclusive, multi functional, Durofix tools whilst adding accessories for its own brand 'Two-in-One' Screwdriver and Collated Autofeed.

The new Durofix 18v Compact Impact Wrench/ Driver and 18v Hammer/Drill/ Driver set a new standard in compact Li-ion power tools.

Specially engineered to be lightweight and versatile the 18v Hammer/Drill/Driver is easy to use and competitively priced. Equally, the 18v Impact Wrench/Driver is easily converted thanks to its selection of adaptors. It covers all socket sizes and with 190Nm of torque it's in a league of its own in today's market.

Compact and well balanced weighing just 1.3kgs each, these new Durofix tools are powered by the latest 1.4Ah Lithium Ion batteries from Sony. They recharge in just 30 minutes and last up to three times longer than traditional rechargeable batteries.

For added-value both tools come complete with a durable carry case, spare bits, brushes and a super bright LED lamp powered by the tool's own battery.

Also this October, Concept is introducing accessories for its popular Two-in-One' Screwdriver and Collated Autofeed - creating an 'All-in-One' Autofeed Solution.

It now includes the option of an extension pole which allows access to ceilings and floors without the need for bending or using platforms and an additional collated attachment for collated screw sizes up to 75mm. This can be easily locked on to the extension pole or the tool itself and comes complete with extended drill bits.

These accessories enhance working conditions and allow better access to awkward and uncomfortable workspace whilst improving health and safety conditions.

The 'All-in-One' Autofeed Solution also provides real value-for-money, effectively negating the need to buy up to four individual tools.
